

TSA Attains Microsoft Gold Certified Partner Status

Houston, Texas (December 28, 2009) Technical & Scientific Application, Inc. (TSA) continues to build on its capabilities and certifications by becoming Microsoft Gold Certified. TSA has elite certifications from many of its partners, including IT heavyweights such as Hewlett Packard Company, Intel, Oracle, Red Hat, VMware and Microsoft. Further, TSA was a certified Microsoft partner already, but wanted to continue to build on its capabilities as well as the Microsoft relationship.

Toby Jeter, Director of Marketing for TSA, says, "We are always looking at ways to improve our knowledge so TSA can build on to its existing capabilities and provide the best IT proposals and implementations to our customers. In order to deliver the best solutions to our customers, we must be IT experts on the engineering and sales side of the business --- especially in regards to the baseline applications. Becoming Microsoft Gold Certified provides further proof that TSA is an IT partner that has both the breadth and depth of knowledge that allows us to continually deliver against our customer's requirements."

TSA and its customers gain many advantages. Gold Certified Partners are the top level of Microsoft solutions partners and have access to the tools and support they need to help them stand out in the marketplace. This gives TSA the opportunity to build the closest possible working relationship with Microsoft, and are guaranteed, at minimum, telephone-based account engagement from Microsoft, along with other top-level benefits such as a priority listing in the Microsoft Resource Directory.

"For our customers, this means they have affordable, premium business consultants available at TSA who can ensure that the right technology is selected to fulfill the current and future business needs," Jeter adds. "Plus, customers have immediate access to the newest Microsoft enhancements and technologies."

Technical and Scientific Application, Inc., has a deep understanding of Microsoft applications and have several customers who can reference its IT expertise in this area. TSA expects to continue to build on the momentum they built in 2009 and garner several more certifications through out 2010. In fact, new certifications are already being processed and are scheduled to announce in early 2010.
